

## Project Report „Autohaus Schweiger in Nesselwang (DE)“ Attractive Renovation of an Old Façade

**That's what it looked like before renovation:**  
The front as well as the backside of the car dealer's shop were clad with wood and "Profilit" glass.

The wood cladding made the building look old-fashioned and dismal. The intent of the renovation was to upgrade the building entirely and make it more customer-friendly.

The positive properties of the fibreglass material fulfilled the requirements of the renovation goal. Due to the low dead weight and the enormous rigidity, fibreglass can be customised for nearly any constructional situation.

Due to the high level of translucence of the twin-walled fibreglass panels a light flooded interior is created in the car dealer's shop, leading to considerably reduced daytime lighting expense.

By installing fibreglass stacking doors and cladding the counter with the same material the homogeneous appearance is emphasised.
