

The new single-skinned High-Speed Door –
the economical-priced alternative

economical-priced

High-Speed Door **NOVOSPRINT®** Basic

BUTZBACH
MADE IN GERMANY

As an additional safety feature we offer optional a light curtain as safety edge.

The High-Speed Door Novosprint Basic features the components which have proven themselves countless times in the High-Speed Door Novosprint successfully since over 30 years.

Many advantages are identical in both door types:

- Lateral opening
- Crash resistance
- Fast opening speed of up to 2 m/s
- Use as internal and external door
- Minimal space requirements
- Problem-free assembly – also for renovations
- Minimal follow-up costs
- Installations and service from a single source

On the contrary to the NOVOSPRINT the NOVOSPRINT Basic is more economical-priced, because it is offered in single-skinned design only instead of twin-skinned design.

Door sizes of up to 4,5 x 4,5 m are available, whereas the numerous standardized sizes allow a considerable price reduction and fast availability. The trailing cable can be replaced by an energy chain optionally.

The clear and expertly conceived construction saves time and expense for service and maintenance work.
